                                                                                                                                                         This sequence encodes the NOVB protein. The invention relates to CC the NOV1-NOV16 proteins, and their coding sequences. The proteins have CC Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and CC cardiovascular activities. The sequences may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate NOVX CC expression. They may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC supplement the patients own production of protein. They are used to CC produce NOVX proteins, by inserting the nucleic acid into a cell and CC culturing it to express the protein. The DNA may be used as DNA probes in assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed CC expression and activity. The anti-NOVX Abs are used for detecting the CC presence of NOVX in samples. Disorders that may be prevented, diagnosed CC NOV7, NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites C characteristic of serincy/threonine kinases, and are used to treat kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular CC the epidermal growth factor (EG)-like super family and are involved in, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and cc cellular adhesion disorders (NOY6-10 are homologous to FGE-11 ke

This sequence encodes the NOV6 protein. The invention relates to the NOV1 NOV16 proteins, and their coding sequences. The proteins have CC the NOV1 NOV16 proteins, and their coding sequences. The proteins have CC victostatic; contraceptive; antiinflammatory; immunomodulatory; and CC cardiovascular activities. The sequences may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate NOVX CC expression. They may be used to treat disorders associated with decreased CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of protein by expressing inactive proteins or to CC supplement the patients own production of protein. They are used to CC supplement the patients own production of protein. They are used in CC assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may CC also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and crivity. The anti-NOVX Abs and antagonist are used for detecting the CC expression and activity. The anti-NOVX Abs are used for detecting the CC expression and activity. The anti-NOVX Abs are used for detecting the CC expression and activity. The anti-NOVX Abs are used for detecting the CC expression and activity. The NOVX protein may be prevented, diagnosed and/OV7 NOV9-11 and NOV13-16 have casein kinase II phosphorylation sites Characteristic of serine/threonine kinases, and are used to treat CC kinase-related disorders (EGF) like super family and are involved in, e.g. regulation of cell development, apoptosis, cell adhesion, growth cell creditions and accivity and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and cc elibrillar adhesion disorders. NOV6-10 are homologous to EGF-like control of cell development, and protein management, and are used to treat cardiovascular disease e.g. fibrillar an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-NOV-1999;

This sequence encodes the NOV2 protein. The invention relates to the NOV1 NOV16 proteins, and their coding sequences. The proteins have CC the NoV1 NoV16 proteins, and their coding sequences. The proteins have CC vytostatic; contraceptive; and tinflammatory; immunomodulatory; and CC cardiovascular activities. The sequences may be used in the prevention, CC diagnosis and treatment of diseases associated with inappropriate NOVX CC expression by rectifying mutations or deletions in a patient's genome CC that affect the activity of protein by expressing inactive proteins or to cc supplement the patients own production of protein. They are used to CC supplement the patients own production of protein. They are used to CC ulturing it to express the protein. The DNA may be used as DNA probes in CC assays to detect and quantitate the presence of similar DNAs in samples, CC and which patients may need restorative therapy. The NOVX protein may cc also be used as antigens in the production of antibodies (Abs) against CC NOVX and in assays to identify modulators of NOVX expression and cctivity. The anti-NOVX Abs and antagonist are used for detecting the expression and activity. The anti-NOVX Abs are used for detecting the CC presence of NOVX in samples. Disorders that may be prevented, diagnosed CC and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5.

CC characteristic of serine/threonine kinases, and are used to treat CC kinase-related disorders (e.g. Peutz-Jeghers syndrome, cellular chesion, cell development, apoptosis, cell adhesion, growth in the epidermal growth factor (ECF)-like super family and are involved in, cell creations, and are used to treat cancers, inflammatory disorders, immune disorders and cellular adhesion disorders. NOV6-10 are homologous to ECF-like contents and are used to treat cardiomyopathy, long-OT syndrome and marfan syndrome.

Cytostatic; contraceptive; and their cooling sequences. The proteins have CC Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and contraceptive; antiinflammatory; immunomodulatory; and CC diagnosis and treatment of diseases associated with inappropriate NOVX CC expression. They may be used to treat disorders associated with decreased contract the activity of protein by expressing inactive proteins or to compression by rectifying mutations or deletions in a patient's genome contract the patients on production of protein in a patient's genome contract the patients of the production of protein into a cell and contract the protein system of the nucleic acid into a cell and contract the protein of protein into a cell and contract and quantitate the presence of similar DNAs in samples, and which patients may need restorative therapy. The NOVX protein may cativity and in assays to identify modulators of NOVX expression and contract into a cell and contract into a case in the Novx protein. Nov1, Nov3, Nov5, cell and contract into a case in the Novx protein would are homologous to treat cancers, inflammatory and are family and are involved in, cell are decreased into a cell adhesion disorders. Nov6-10 are homologous to EGF-like conformed are used to treat cardiovopathy. Inda-Or syndrome and marfan syndrome e.g..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     19-NOV-1999;

specification descr.'
WF-HABP, WF-"

WF-HABP, OE-HABP,

equence encodes a hyaluronan binding protein. The describes four hyaluronan binding protein, known as ABP, OE-HABP, and BM-HABP. The polypeptides are useful diseases such as proliferative conditions, metastasis,

proliferative

HABP, OE-HABP, and diseases such as p

metastasis,

457pp;

English.

hyaluronan-binding proteins, known as full-length WF-HABP, WF-HABP and BM-HABP, useful for treating proliferative conditions, astasis, inflammation, ischemia, arthritis and multiple scleros

sclerosis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; anticonvulsant; osteopathic; antiarthritic; immunosuppressant; cardiant; immunostimulant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; immunosuppressive; antiinflammatory; antiviral; antibacterial; antifungal; antifuematic; antithyroid; antivalemnic; gene therapy; cancer; proliferative disorder; hypertension; neurodegenerative disorder; osteoarthritis; graft vs host disease; cardiovascular disease; diabetes mellitus; hypothyroidism; SCID; AIDS; cholesterol ester storage; systemic lupus erythematosus; infection; severe combined immunodeficiency; malaria; autoimmune disorder; asthma; allergy; aplastic anaemia; nocturnal haemoglobinuria; burn; wound; bone damage; cartilage damage; antiinflammatory disease; coagulation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antihetensive; dermatological; immunosuppressive; antihinflammatory; antibacterial; antiviral; antithugal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORRY-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus arrive entering severe combined immunodefficiency (COTN) and storage and storage and storage and storage and storage and storage and storage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames I to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant;

               Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of protein by expressing inactive proteins or to supplement the patients own production of protein. They are used to produce NOVX proteins, by inserting the nucleic acid into a cell and culturing it to express the protein. The DNA may be used as DNA probes in assays to detect and quantitate the presence of similar DNAs in samples, and which be activities and described by the protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4393

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1508
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       also be used as antigens in the production of antibodies (Abs) against NOVX and in assays to identify modulators of NOVX expression and activity. The anti-NOVX Abs and antagonist are used to down regulate expression and activity. The anti-NOVX abs are used for detecting the presence of NOVX in samples. Disorders that may be prevented, diagnosed and/or treated vary depending on the NOVX protein. NOV1, NOV3, NOV5.

Complement the patients own production of patient's genome that affect the activity of protein by expressing inactive proteins or to consume the patient's own production of protein. They are used to produce Novy proteins, by inserting the nucleic acid into a cell and continue Novy proteins, by inserting the nucleic acid into a cell and continue Novy protein may need restorative therapy. The Nova protein may cand which patients may need restorative therapy. The Nova protein may cand which patients may need restorative therapy. The Nova protein may cativity. The anti-Nova has and antiponist are used to down regulate convavand in assays to identify modulators of Nova expression and cativity. The anti-Nova has are used for detecting the capteristic of semines. Disorders that may be prevented, diagnosed and/or treated vary depending on the Nova protein. Nova, Nova, Novy-11 and Novi3-16 have casein kinase II phosphorylation sites characteristic of serine/threonine kinases, and are used to treat ckinase-related disorders (e.g. Peutz Jephers syndrome, cellular conjection, cell structure and motility and protein management, and are used to treat cancers, inflammatory disorders, immune disorders and cellular adhesion disorders. Nov6-10 are homologous to EGF-like conventions and are used to treat cardinary cardinary disorders, and are disorders e.g. hypertrophic cardinary disorders and marfan syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          the NOVI-NOV16 proteins, and their coding sequences. The proteins have Cytostatic; contraceptive; antiinflammatory; immunomodulatory; and cardiovascular activities. The sequences may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate NOVX expression. They may be used to treat disorders associated with decreased
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel human polypeptides and the nucleic acids that encode them useful for preventing, diagnosing and treating e.g. cancer, inflammation and
hypertrophic cardiomyopathy, long-QT syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence encodes the NOV10 protein. The specification describes four hyaluronan-binding protein, known as MF-HABP, WF-HABP, OE-HABP, and BM-HABP. The polypeptides are useful for treating diseases such as proliferative conditions, metastasis, inflammation, ischemia, host defence dysfunction, immune surveilland dysfunction, arthritis, multiple sclerosis, autoimmunity, immune dysfunction and allergy.

The polynucleotide are useful for chromosome identification. The nucleic acids, protein, antibodies, agonists and antagonists are useful in the diagnosis, treatment and prevention of cancer (e.g. cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital), immune disorders (e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   colitis, acquired immunodeficiency syndrome, AIDS), cardiovascular disorders such as myocardial ischaemias, wound healing, neurological diseases (e.g. Parkinson's disease, Alzheimer's disease, cerebral and and epilepsy) and infectious diseases such as viral, bacterial, funga and parasitic infections. Numerous examples of each type of disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mice, rabbits, goats, horses, cats, dogs, chickens or sheep. The polypeptides can also be used as a food additive or preservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The sequence encodes a novel Human cancer related protein. polynucleotides and polypeptides are useful for preventing, treating or ameliorating a medical condition in e.g. humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        4057

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      γ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel cDNA sequences

Which encode human secreted proteins. The cDNA sequences have been

derived from a variety of human tissues. The invention also provides

a method for producing proteins from these polynucleotide sequences.

The proteins are useful for identifying compounds that modulate their

cativity and production, and the cell is also useful for identifying

compounds that modulate expression of the polynucleotide sequences
